

Monitoring Moray Coastline

1 of 2

April '24 to March '25

£28,000

Moray Council

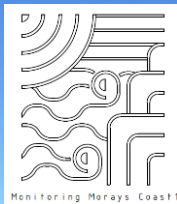

Lossiemouth East Beach ©Moray Council (2023)

Overview:

Our project aims to create a network of photographic monitoring points along the Moray coastline. These points will allow the community to upload photos of coastal change from the same viewpoint. These photos will be uploaded to CoastalSnap.com allowing access for all to monitor the change, This information will be used to inform Moray Council's Coastal Adaptation Plans.

What are the project aims:

- How communities engage with active monitoring of the coastline
- Indicative rate of change of the coastline based on regular monitoring from the same point
- Greater understanding of the impacts of storm events
- Can these photos be used to assist in the prediction of the rate of change at a given point along the coastline
- Greater community engagement on Coastal Adaptation

£28,000

Moray Council

Lossiemouth East Beach Point 2 Coastal Snap Point

Overview:

Our project aims to create a network of photographic monitoring points along the Moray coastline. These points will allow the community to upload photos of coastal change from the same viewpoint. These photos will be uploaded to CoastalSnap allowing access for all to monitor the change. This information will be used to inform Moray Council's Coastal Adaptation Plans.

What has happened so far

- 10 of the 14 points have been installed.
- Since the installation on the 18 February over 40 photos have been taken.
- The most popular location is Lossiemouth East Point 4, which has had 7 pictures taken.
- We have a mix of both one off and regular users.
- Sites are being updated with key information such as changes since last update and reason for change e.g. Wind
- Next steps are to install permanent signs and after 3 months analysis initial data from the monitoring stations to monitor change.
