

Assessing the Effects of Anti-Tank Beach Defences on Sandy Coastlines

April '25 to March '26

£35,000

Moray Council

Overview:

To evaluate the environmental impacts of historic anti-tank beach defences on sandy coastlines and develop strategies for mitigation and restoration.

What are the Project Aims:-

- Documentation of the environmental impacts of anti-tank beach defences on sandy coastal ecosystems
- Practical strategies to mitigate negative impacts, including removal or re-purposing of structures and habitat restoration techniques
- Guidelines for policymakers on managing historical defence structures in coastal areas
- Resources to raise awareness about the historical and environmental significance of these structures.
